A large passenger ship, the Titanic, is shown at night, illuminated by its own lights and reflecting on the dark water. The ship is viewed from a low angle, emphasizing its scale. The background is a dark, starry sky.

# ANSWERING QUESTIONS ABOUT TITANIC

NANODEGREE

UDACITY

OCT - 2018

BY DAVI DE PAULO

# OVERVIEW

---

## ANALYZING DATA FROM TITANIC TRAGEDY

In this project, I will try to answer questions that was raised by experts and society in general after this historical tragedy that marked a generation.

Feel free to add your own questions and I will try to implement into the code. The data is public, so the code will be also public at my github account.

Everyone is welcome to contribute. Let's get started!

# QUESTIONS

## QUESTIONS

In the following page, I will list a series of questions that people from around the world could've asked as well as those questions I was inclined to do so. Like I mention before, feel free to add your own ( maybe we can lower the risks of future sinking boats! :)

# 891

## **PASSENGERS**

We are working with a dataset of 891 passengers of which only 712 contains relevant and demographic information about them.

We found that 554 passengers embarked in Southampton  
130 embarked in Cherbourg and 28 in Queenstown

WHERE DID THE PASSENGERS EMBARKED?

**554**

SOUTHAMPTON

**130**

CHERBOURG

**28**

QUEENSTOWN

I will drop all values where Age column is missing values  
So, we will work of a dataset of 712 passengers

# 712 PASSENGERS

Embarked

We discovered that 2 women  
did not board the ship

Remember: Missing your train or boat can sometimes save your life.

## WHAT DO WE KNOW ABOUT THE SURVIVORS?

Out of the 712 passengers

**40%**

SURVIVED

The amount of survivors from the dataset is 288 of which 712 embarked. This represent 40% of passengers from the dataset

# 712

PASSENGERS

## WHO WERE THE PASSENGERS?

# 573

ADULTS

# 139

# CONCLUSION

## OUTLINING SOME FINDINGS

I would assume that many children and women survived because the vast majority of men were gentleman and had a great sense of protection. Kids and female adults outnumbered the number of men despite the higher number of male adults being onboard. I also would add the fact that the intense physical activity of the males trying to help everyone, decreased their body temperature, resulting in higher deaths caused by hypothermia. Females adults who embarked in Southampton from 2nd class had the higher chance of survival

# 17%

FEMALE ADULTS WHO  
EMBARKED IN SOUTHAMPTON  
FROM 2ND CLASS, HAD THE  
HIGHER CHANCE OF SURVIVAL
